```

## Number of patients who enter ED

- A couple of Local Health Boards (LHBs) were redefined from the 1st of April 2019 onwards: Cwm Taf (27)→ Cwm Taf Morgannwg (30)// Abertawe Bro Morgannwg (26) → Swansea Bay (31). Therefore, if you decide to forecast at LHB resolution, you might want to consider these 4 as a unique one.
- A the Princess of Wales Hospital changed its Local Health Boards
- So we analyse these 4 as one organisation

## Group the changed Local Health Board together

```
data1_grouped <- data1 %>%
  mutate(Grouped_Organisation = case_when(
    Organisation %in% c("Cwm Taf", "Cwm Taf Morgannwg", "Abertawe Bro Morgannwg", "Swansea Bay") ~ "Gronfa Iechyd Cwm Taf Morgannwg",
    TRUE ~ Organisation
  ))
```

## There are 6 Local Health Boards

```
unique(data1_grouped$Grouped_Organisation)
```

```
## [1] "Betsi Cadwaladr"      "Hywel Dda"           "Grouped_organisation"
## [4] "Cardiff & Vale"       "Aneurin Bevan"       "Powys Teaching"
```

```
data2_hts <- data1_grouped %>%
  group_by(Grouped_Organisation) %>%
  summarise(Number = sum(Number))
```

## Number of patients who enter ED under 6 different local health boards

```
data2_hts |>
  ggplot(aes(x = YearMonth, y = Number)) +
  geom_line(stat = "identity") +
  labs(y = "Number of patients",
       title = "Number of patients who enter ED") +
  facet_wrap(vars(Grouped_Organisation), scales = "free_y", ncol = 3) +
  theme(legend.position = "none") +
  theme(axis.text.x = element_text(angle = 45, hjust = 1))
```

## Number of patients who enter ED

## Change the Age\_Code structure into different groups

```
unique(data1_grouped$Age_Code)
```

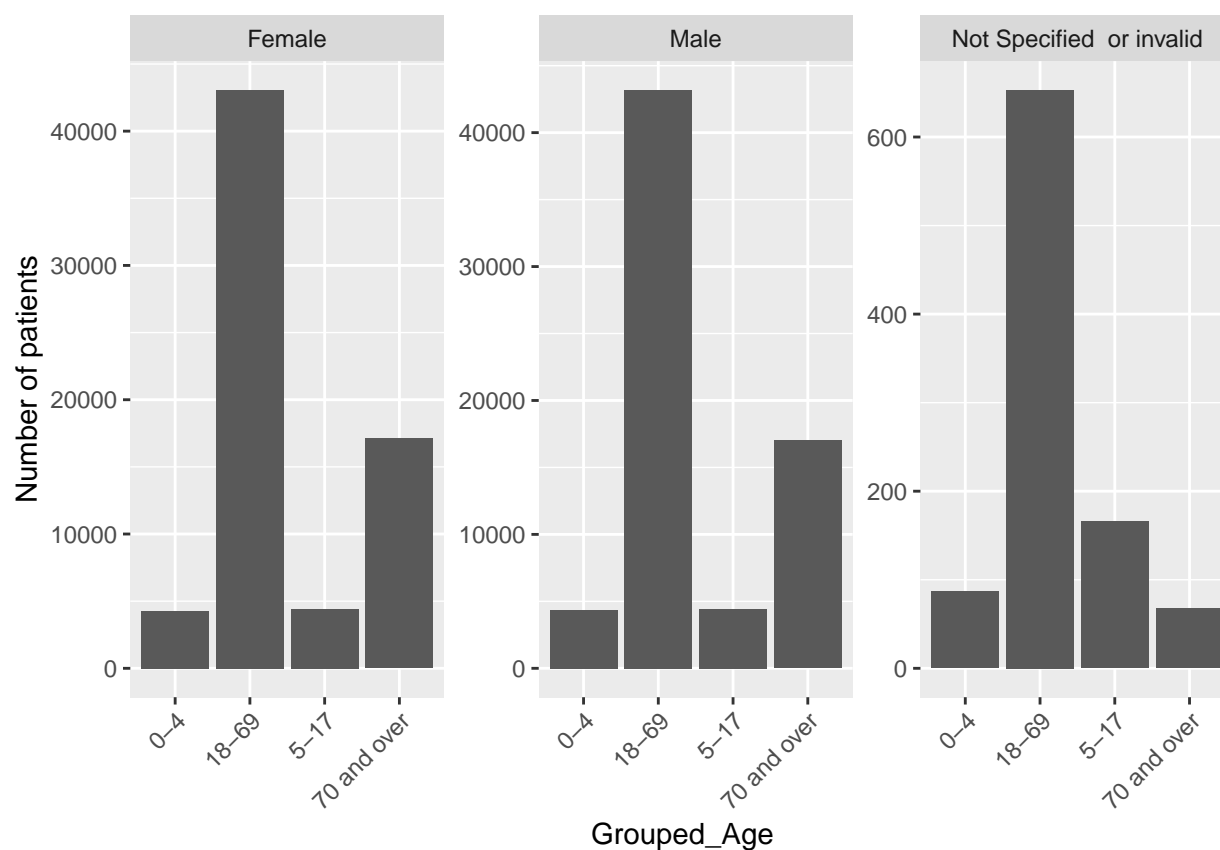

```
## [1] "0 to 4" "18 to 24" "25 to 29" "30 to 34" "35 to 39" "40 to 44"

```

- bts: This contains the forecasts for the different series. It's a time-series matrix.
- histy: This represents the historical data for the different series.
- labels: This list contains labels for the different levels in the hierarchy.
- method, fmethod: These are metadata about the forecasting process, indicating the method used for forecasting and combination.
- nodes: Information about the nodes at different levels in the hierarchy.
